

About our company

hightech ceram presents itself as a young, flexible, dynamic and internationally operating company, whose experience in development, production and the application of ceramics was started in the early seventies, and particularly focuses on the areas of special or engineering ceramics, high temperature ceramics/kiln furnitures, insulations with ceramic fibres, wear/corrosion protection (procelain, sanitary ware, electro-porcelain and bone china, earthenware, stoneware, tiles, split tiles, etc.)

Starting with products from the material groups for special ceramics, e.g. alumina, zirconia, silicon carbide, boron carbide, boron nitride and silicon nitride, we integrated further fields of operation in the course of our still young development process, which are showing very positive trends. Worth mentioning are coating technology, the wide range of kiln furnitures and refractories as well as high temperature insulations using ceramic fibres.

In nearly all fields we are cooperating with leading companies, institutes and universities. All novel know-how obtained from these key sources is immediately integrated into the production and manufacturing of existing and new ceramic materials and can be employed in application from the beginning. The result of these efforts is that we can be proud of representing renowned companies, some of them operating worldwide, thus fulfilling our tasks and supplementing our product range. It is our objective to open up new fields of application on the basis of innovative materials and ideas, to expand them and to work out satisfying "tailor-made" solutions in close cooperation with our customers.

Besides using standard materials and solutions, we find new approaches, and, if necessary, adapt materials to fit each individual customer's special requirement in the best possible way. This scope of service will most likely distinguish us from all of our competitors. From development to prototype and serial production, we are always ready to do the job for you, in Germany or in the countries where we are represented: Great Britain, U.S.A., Russia, Bulgaria, Romania, Czech Republic, Hungary and India, which will help reduce any possible language barriers.

Our Bulgarian staff also represent our company in Russia, Ukraine, Kazakhstan and other countries of the GUS, as they all speak Russian fluently and travel in these countries regularly.
